

SQUID FINANCE

Multichain Investment Protocol

An intergalactic approach to investing and developing DeFi Technology through eCommerce and novel NFT Protocol.

Multichain Deflationary Rewards Token

Introduction

A message from the SQUID SQUAD

Yeah, I know what you're thinking. Not another community token promising the space and moon. But wait, hear us out for a second. We're a group of crypto enthusiasts and investors from around the planet. Our backgrounds and skillsets are diverse and we're constantly growing. We're creating a community of investors that will seek to empower the retail trader and draw institutional interest through fidelity. We're creating a community of investors, truly run by our community.

We're making De-Fi safe and rewarding in an extraordinary way. Our development community will constantly grow, taking in people from around the world. The USA, UK, Russia, China, India and everywhere in between. That's the whole point of crypto. Liberating people, creating opportunity, and leveling the gap of inequity between the rich and the poor, no matter where you come from. If you believe in those ideals, you know why you invested in crypto in the first place.

It's what led you to invest your savings into Bitcoin and keep it invested for years despite multiple large corrections and bear markets. And even so, some of you are still up 40000% and that's just cause crypto is not just an investment. It's a technology that's designed to replace the legacy FIAT system. And it's still nascent. As the technology continues to unfurl, we're going to see the cryptoverse converge further and further with the tangible real world. Slowly seeping into reality and becoming a part of the greatest value exchange system that mankind has ever created.

When we look to the future, the tech we develop now as a collective will be the bones upon which the muscles of the future exert mankind's collective effort to push our reach far beyond earth. The final frontier of space is coming closer and closer to being conquered by humanity. We created SQUID Finance to help make that transition and gather people who see the same vision for the future. So yea, if you're not technically savvy you could probably stop reading here and just ape in now. If you are a blockchain expert and you've read this far, you know what we're creating. If you're an investor and you missed out on adopting Bitcoin in 2011, don't worry. DeFi startups have a history of outperforming Btc by thousands of percent.

Strap up. We've got our missions ready.

#Missions

Mission #1: Bridge the FIAT -- Blockchain Gap in Smartchains

"The goal of SQUID Finance is to create a suite of financial products and services that function to bridge ecommerce and legacy fiat and traditional value exchange mechanisms with blockchain technology in order to increase investor interest and retention in DeFi while expanding the reach of cryptocurrency to the retail investor by introducing more tangibility to crypto."

Mission #2: Establish Proof of Concept for physical NFTs

"To provide proof of concept for novel NFT trading and transacting protocols through ecommerce and retail." This introduces several new ways to incorporate NFTs into traditional legacy financial products while increasing visibility of the ecosystem. The "NFT token product protocol" is a concept that can revolutionize the way major brands interact with the world, by creating a concurrent system of commerce alongside NFTs.

Mission #3: Advance De-Fi Technology through R&D

"To further develop blockchain technology through direct investment in DeFi projects that exhibit potential for innovation and further advancement of key solutions that improve the entire space".

Mission #4:

Create a Repo of Blockchain Wealth

"To become a recognized repo of intergalactic wealth and an authority on space investment. To make direct investments into the downstream industries, programs and projects that would contribute to the achievement of conquering the final frontier; Space."

Mission #5:

Establish the SQUID Proof of Stake Blockchain

"To assemble a team of blockchain experts with the singular goal of creating a truly decentralized blockchain that is designed to work together with CBDCs and bring exposure to mixed financial assets by incorporating legacy investment products like stocks, bonds, treasury notes and money markets."

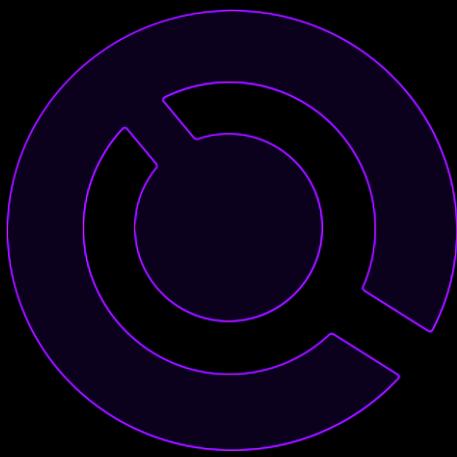

Mission #6:

Create the first Ticketing System for Space Travel

"To create a system of ticketing for space travel based on our proprietary pNFT protocol."

The SQUID token would be the first step in accomplishing our missions. Launching first on the Binance Smart Chain and then on subsequent leading smart contract enabled blockchains. We intend to leverage the power of DeFI investment Protocols to create financial products based on the convergence of blockchain technology with ecommerce, internet virality and the future of civilization - space. Blockchain and space tech being the two most disruptive technologies of our time.

Space travel is quickly becoming a possibility. With billionaires fixated on the stars, you should be adding “space” to your portfolio.

SQUID Finance Token

\$SQUID is a Multichain Deflationary Token Investment Protocol. The SQUID token will be launched on major De-Fi smartchains that are committed to the advancement of decentralized finance.

SQUID Token will be deployed on multiple blockchains to increase the rate of adoption and visibility. DeFi is being developed at a rapid pace and we're now in a position poised to leverage the power of multiple blockchains to increase the advancement of purpose-driven novel financial concepts.

SQUID Finance has identified the following Blockchains to be of strategic interest for deployment:

- 1) Binance Smart Chain
- 2) Ethereum Block Chain
- 3) Polygon
- 4) Cardano Alonzo Block Chain

The DeFi space is growing stronger than ever. We will be engaging in conversations with other promising side chains to expand our reach even

further, SQUID token will be the foundation for the development of financial products and protocols that govern all systems of exchange around SQUID Finance.

SQUID Tentacle fiat onboarding is bridging the gap between tangible retail and cryptocurrency.

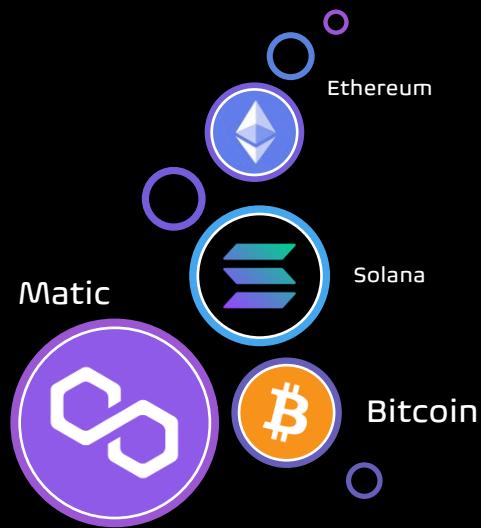

Our robust economic models, community driven tokenomics and reward systems can provide stellar returns for \$SQUID holders while building trust, equity, and value in the defi ecosystem. We're rewarding holders with the things they actually care about from industries in entertainment and eCommerce e.g. Netflix , Spotify and Amazon.

It is a cryptocurrency asset created to become a store of wealth worthy of the cosmos, and so it must be rewarding in a tangible and meaningful way. Cryptocurrency is the financial archetype of the future and decentralized technology will govern the way future wealth is distributed. SQUID token was created to provide a simple way for the retail and casual investor to maximize their investment through sophisticated investment strategies while providing capacity to develop the industry at the research level.

Economic Legend, Kathy Woods identifies space development where it coincides with technology to be the most disruptive overlap of technology that we would see in our lifetimes.

THE COMET FUND

Pillars of Investment

The star of \$SQUID token is the Comet Fund which is a multilayer pooled equity fund. This unique feature will turn transaction volume into returns for our investors through direct reinvestment and static rewards.

The comet fund contains an amalgamation of investments into large-cap, mid-cap and small-cap defi projects which will be backed with locked liquidity pairs against the \$SQUID token. Assets will be purchased dynamically guided by market conditions, technical analysis, and consideration of several key macroeconomic factors.

One token with exposure to Bitcoin, Ethereum and the whole defi universe.

Gain exposure to multiple mid to large-cap coins without worrying about entry points or take profits. Our fund is managed by a team that constantly monitors market conditions to provide the best entry and exit points with an effort to maximize crypto holdings while maintaining a steady pool of stablecoin. Acquired liquidity will be locked and paired to SQUID as we continuously convert transaction volume to our reserves of cryptoassets.

INVESTMENT Model:

- **The Tentacle Fiat Protocol:** The tentacle fiat protocol is a term used to encapsulate multiple routes of fiat liquidity generation outside of the blockchain trading pairs. This includes 100% of the net-profits generated by the SQUIDverse NFT+ Marketplace.
- As the prices of various portfolio assets rise, portions will be reinvested and then a small amount will be turned into stablecoins tethered to SQUID token. As external market prices fall, stablecoin reserves will be used to expand investments in selected assets.
- Asset prices will be continuously monitored to make purchases at the best available price. Crypto Assets will be dynamically purchased and reported quarterly and annually.

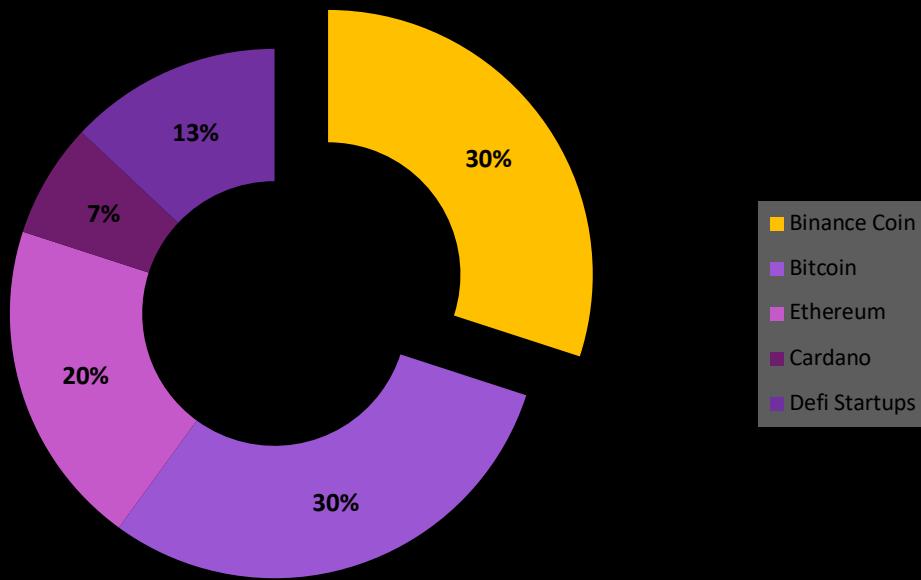

The following assets have been identified for strategic allocations in addition to our holdings of Binance Coin:

- Bitcoin
- Ethereum
- Cardano
- Matic (Polygon)
- Solana

The largest portion of our portfolio will be held in Binance Coin (BNB) and Bitcoin (BTC) followed by proportional investments in Ethereum (ETH), Cardano (ADA) , MATIC and other DeFi startups.

The Comet Investment Fund will be used to create and fund ventures that bring awareness to blockchain and space innovation. It will be used to create

downstream investments that would seek to create opportunities for partnerships with other blockchain projects.

Holding SQUID token means you have multiple layers of growth for your investment.

Diagram 1: The Comet Fund LP Portfolio Distribution *Percentage % of SQUID Tokens in Comet Fund will vary dynamically based on volume.

Routes of Capital Appreciation

- Percentage Appreciation from Equity Pool Growth.
- Percentage Appreciation through token adoption from SQUID.
- Percentage Appreciation through volume generation from dynamic rewards.

Passive Income rewards paid out through SQUID tokens, calculated daily, and applied instantly on every transaction through the smartcontract.

Diversified Funds

Tokens in the Comet Investment Fund will be spread across a mixture of low and medium-risk pools, along with one or two high-risk/high-reward pools to bring the average APR up overall without increasing the risk profile of our portfolio to an unacceptably high level. The list of pools will be changed

automatically as yields increase/decrease, to ensure we are always invested into the best paying farms in the low/medium/high risk categories. Over time, the number of farms in our pool will increase, allowing us to scalp the best rates available and boost the overall returns to investors.

Risk Management

Yield farming will never be a zero-risk investment and there will always be the possibility of lower-than-expected yields or loss, but with SQUIDvest we can reduce these risks and create a steadier, lower-volatility return through institutional technical analysis and consultation.

Disruptive Economic Model for Capital Gains and Revenue Generation

Our economic model for revenue generation is double pronged through both direct investment and E-commerce.

eCommerce Model:

- Token Buyback Model: The comet fund will be continuously replenished by liquidity provided via sales from the SQUIDverse NFT+ Marketplace. This generates positive buying pressure which keeps prices stable and increases token visibility by attracting major exchanges. It also encourages a rising price floor to ensure investors are protected from large market swings.
- SQUID Token Cards: Tokens are generated through token trading activity or trading volume which is in turn used to route tokens to buyers from the Marketplace who will receive them upon redeeming their tokens from their verified purchases.
- SQUID Token NFT Products: NFT Token Products are paired to the owner on the blockchain it was minted on. Buying tokenized physical or digital NFTs will trigger a transfer event from the SQUIDverse Vault account via one of our NFT Partners and then a NFT will be transferred to the buyer's specified wallet address. The physicalized NFT (pNFT) will be shipped to buyer's physical specified address.

Proof of Concept: NFT as a Digital Product

NFTs as a digital product introduces a novel way to directly bridge NFTs with legacy FIAT.

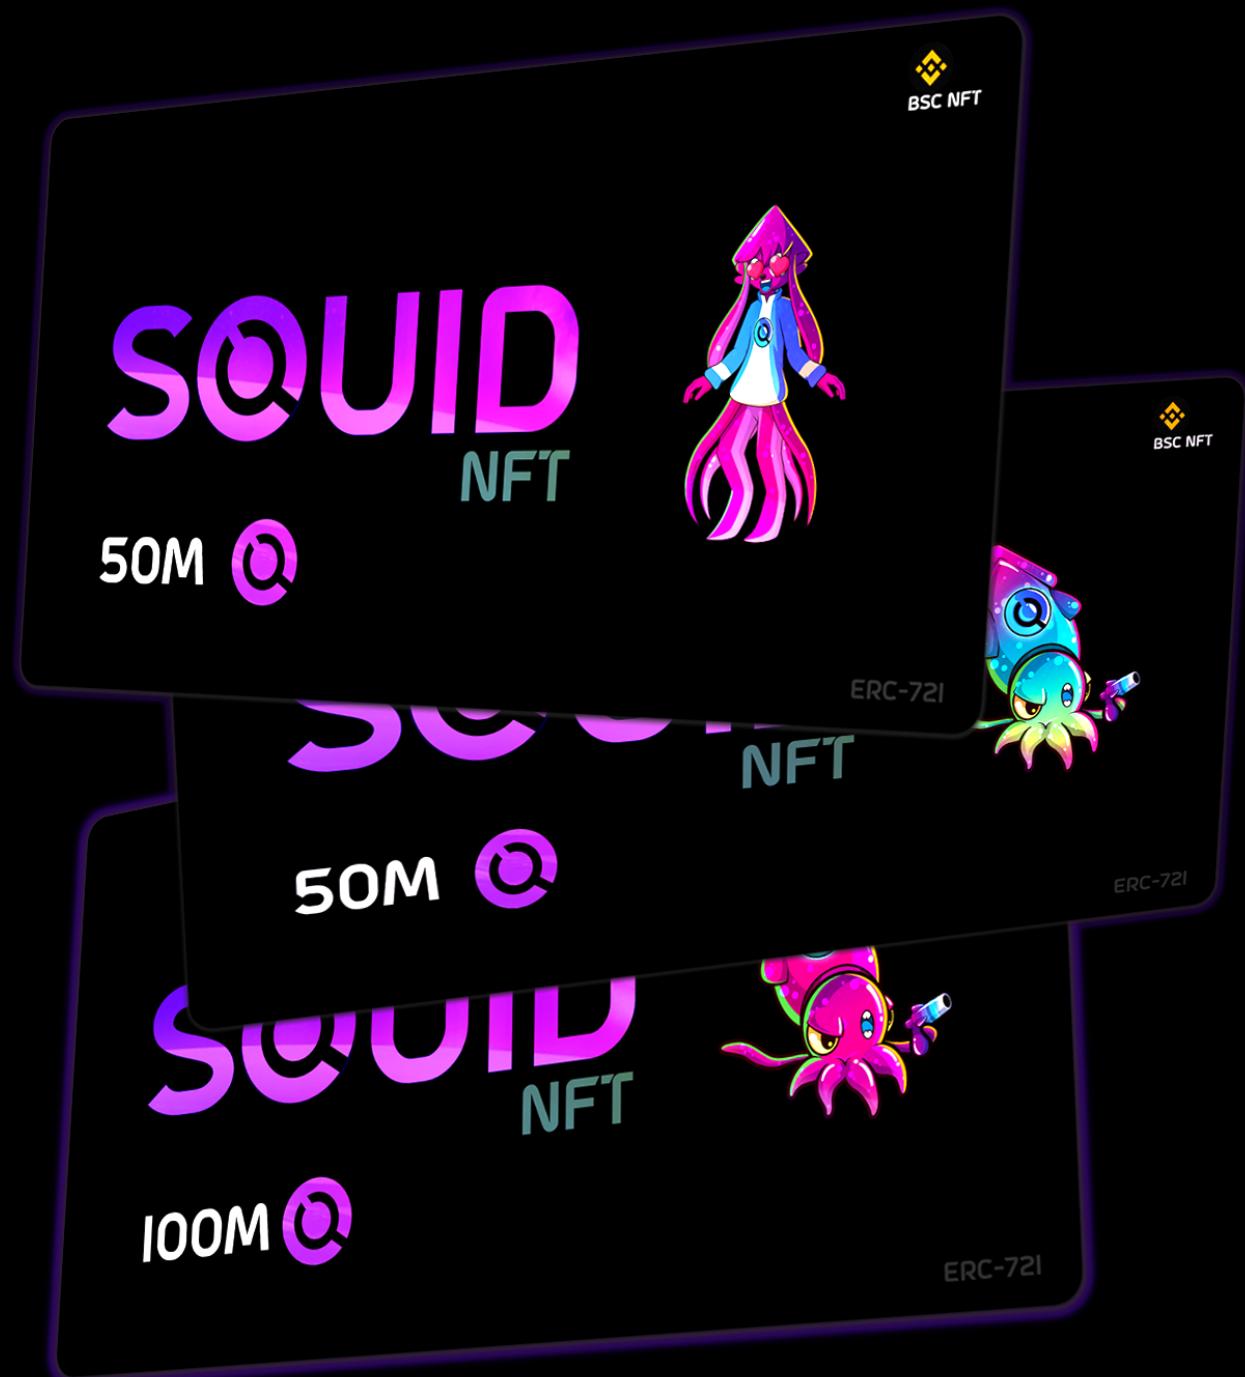

NFTs as a product offers verification of ownership through the blockchain and offers a pain-free way to acquire and trade NFTs. Physical NFT cards can be traded in person* or shipped to any address worldwide. Or they can be digitally traded via their digital form (qNFT).

Initial NFT Marketplace Collaborations:

- 1) OpenSea – ETH & Matic
- 2) Treasure Island – BSc & Matic
- 3) Rarible – ETH

Putting your NFTs in front of millions of buyers.

NFTs purchased from the SQUIDverse Marketplace are minted on major blockchains and leading specialized NFT trading platforms. After purchasing, the NFT (pNFT) is transferred to the specified wallet upon checkout and the physical NFT Card is shipped to the specified address. Our NFTs utilize classes and can be either Real (pNFT, Tangible) or Virtual (rNFT, Intangible). The latter are represented by editions of the pNFT which are always available and tradable called rNFTs.

Physical NFTs confer rarity in an extraordinary way.

pNFT and perceived value trading model: Adding tangibility to NFT classes serves to increase perceived value and creates a physical tether to which additional NFTs can be valued against. pNFTs carry the highest weighting in

Rarity Scoring. pNFTs stored in a secured asset vaults carries an even higher value.

Extrapolations of this concept can provide true value to brand ambassadors, collectors, social media influencers, NFT traders and data for determining the fair market value of any NFT-bound physical item.

Own a piece of the moment by trading editions.
Editions are NFTs that are part of a physical item.
Not just cross-chain, cross-NFT as well.

In SQUID token's case, digital products sold on our marketplace will generate FIAT which will be routed via SQUID token LP Holdings (BNB, ETH OR MATIC) to either trigger mint NFTs or add liquidity (See above for allocation strategy for the Comet Fund).

- Triple-Investment NFT Model: 1/3 of the transaction will be issued in \$SQUID tokens and the other 1/3 will be used to create the digital record of the value exchange on the blockchain in the native token (ETH/BNB/MATIC). This constitutes a "Buy Event" on the respective NFT marketplace from the SQUID Repo on that Marketplace. The final 1/3 will be used to cover transaction fees, minting and gas fees.
- ShipMint: Your SQUID NFT Card will be shipped to the specified address upon checkout and the NFT will be fulfilled simultaneously. Fulfillment of the NFT will involve the complete transfer of ownership of the pNFT to the owner's specified BEP-20 or ERC-20 enabled web3 wallet e.g. MetaMask or TrustWallet that is connected to that marketplace.
- SQUID NFT Cards– the pNFT contains a redeemable code (SCode) that can be used to redeem a qNFT from the SQUID Vault. Redemption of the qNFT results in a "Transfer Event" that transfers the qNFT from the SQUID Vault to a private wallet. This is the final point of the transaction model and can be replicated with any item.

pNFT Binding Protocol via Proof of History

Each pNFT will have a unique hexadecimal code (SCode) that will be embedded onto the card/item. The SCode will verify ownership of the FIAT value exchange through blockchain augmentation. The SCode is a dual-codex which codifies the FIAT txID and the original transaction minting (qCode). A version of this code is printed on the pNFT. To pass authenticity testing, the

SCode can be validated through an online validator. The qCode will only be issued to the original buyer of the NFT.

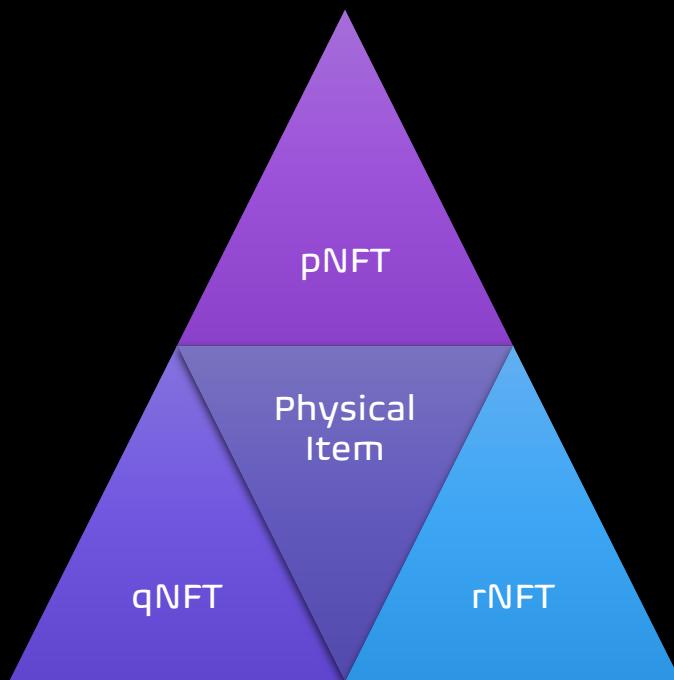

Diagram 2: NFT System of Distribution NFTs are related to the physical asset in 3 ways. The highest rarity would be attributed to the pNFT while the lowest rarity will be attributed to the rNFT.

Redemption of a pNFT via SCode:

SCode: Whomsoever possesses a card and a validated sCode via qCode can transfer the qNFT (intangible, tradable NFT) from the SQUIDverse Vault to a private wallet.

pqr Model of shared ownership model:

A new model must be created to create a system of value exchange that intermingles with the blockchain which seamlessly adds value to NFTs in the form of physicality via rarity and allows appreciation and frictionless trading while maintaining a physical store of wealth. This leverages the advantage and benefits of tangibility with those of the intangible and combines them both in an extraordinary way.

So technically, 3 iterations of the NFT exists. The SQUID NFT Card (physical card is shipped to buyer which contains the SCode), the pNFT (generated from the sale of the physical card produces the SCode) and a third class the qNFT

(generated upon redemption of a the SCode with a qCode). Complete ownership is where you have all 3. Shared ownership where you own the pNFT and someone else possesses the physical item or qNFT. Partial ownership is where you own the edition version of the NFT, You own part of the experience.

SquidCards™

- Tiered Hodler Reward Cards: Tiered holders will be rewarded with multiple membership benefits including free Netflix and Spotify Subscriptions at the highest level for holding specific balances of SQUID Token. More benefits will be added as we grow including discounts on trading fees and signup bonuses with Binance, Bitmart and ByBit. Hodl cards are physical cards that can be reloaded and used wherever Visa/MasterCard is accepted.
- SQUID Token Cards: Fixed USD denomination cards which are physically or digitally delivered. Physical cards contain a scannable QR code for the equivalent amount of SQUID token at the time of purchase. Digital cards can be redeemed online.

SquidCards™ allow you to directly purchase SQUID tokens using your credit card or all major legacy fiat checkout methods.

The Tentacle Fiat Onramp will allow users to purchase SQUID directly through the SQUIDverse store. With trouble brewing and regulations increasing over all exchanges. This unique use case scenario will allow users to directly purchase SquidCards™ which will be issued with USD denominations (multi-currency denominations coming soon) that will be pegged to the value of SQUID token at the time of purchase.

Tokensback for purchasing merch

One of the most unique feature of SQUID token is the SQUIDverse NFT Marketplace which incorporates The Tentacle Fiat Onramp Protocol. This allows users to obtain SQUID tokens directly by making purchases through our online stores.

Timeline of Developmental Goals

Phase: MILKY WAY

Milky Way is the first phase of SQUID Finance's Launch. Key milestones have been identified for the success and widespread adoption of SQUID Token.

The following RoadMap is to be used as a guide for the project launch. Specific dates will be announced on our social media channels and the SQUID Blog on our website.

The following roadmap outlines some of the goals and milestones that we intend to accomplish. This should serve as a guide and other initiatives and promotions will be announced via our Social Media networks.

	Timeframe	Objective
Prelaunch Phase Completed	March 15 th , 2021	Feasibility Study – Research and Consultation with Blockchain, De-fi and cryptocurrency experts.
	April 4 th , 2021	Meeting with key stakeholders and partners in legacy FIAT systems.
	May 1 st , 2021	Venture capital funding received.
	May 30 th , 2021	Team Recruitment: A team of individual developers recruited. They possess specific skill sets across several industries that are geared towards the strategic advancement of SQUID Finance.
	June 1 st , 2021	SQUIDswap concept proofed.
	June 20 th , 2021	Token website design initiated.
	August 21 st , 2021	Beta testing of SQUIDverse website. SQUIDverse NFT+ Marketplace Beta

		<ol style="list-style-type: none"> 1) Tentacle FIAT Onramp Beta 2) Add Premiere NFT Collection 3) Add SQUID Merch to Store 4) Add Digital SQUID Token Cards
	October 1st, 2021	<p>Community Admins and Moderators: It is vital for our Discord and Telegram to have friendly moderators who would be active in multiple time zones. Our selection will include a strong team of moderators from time zones across the globe to always be interacting and informing the community of different updates and the progress made with the token.</p>
	October 27th, 2021	<p>Coverage of DxSale Presale:</p> <ol style="list-style-type: none"> 1) This presale would be advertised on major social media platforms: Facebook, Instagram and TikTok, Telegram Marketing, Reddit Marketing. 2) Coin Lists: Freshcoins.io and Coinhunt.cc 3) YouTuber Onboarding. 4) Blog Partnerships.
Launch and Adoption Phase In Progress	18th November, 2021	<p>Announcement of DxSale Launchpad: Announcement of the link will be made on all social media accounts 5 days prior to presale AMA on Dxsale.app.</p>
	3rd-23rd, November 2021	<p>Token Locker Distribution: Tokens will be locked away via DxSale Locker with the specific purpose to expedite all our exchange listings and future chain launches.</p>
	November, 2021	<p>Public Presale initiated via DxSale.network</p>

	December, 2021	BSC Liquidity Pool Lock: DxSale will be used to lock the initial liquidity pool for 1 year.
	December, 2021	Launch on Pancakeswap via DxSale.network
	January 15th, 2022	Establishing the SQUID-Bitcoin LP Pair
	January 19th, 2022	Listing on Coingecko: We value the importance of reaching a wider audience of investors and create a community that values trust with each other.
	January 19th, 2022	Exchange Listing #1: We have identified BitMart and WhiteBit to be the first exchanges that would be approached.
	January 19th, 2022	Application for TrustWallet – or at 2500 holders, whichever is first.
	January 28th, 2022	Final Rollout of Presale Rewards- Netflix and Spotify Account Distribution
	January 30th, 2022	SQUID Games Promotion Campaign
	February 1st, 2022	Facebook and Instagram Ads Rollout
	February 1st, 2022	CERTIK Audit Application
	15th February, 2022	Ethereum Blockchain Launch on Uniswap* *Community Vote required for specific date.
	February 19th, 2022	Establishing the SQUID-ETH Liquidity Pair
	5th March, 2022	Exchange Listing #2: We have identified BitMart and WhiteBit to be the first exchanges that would be approached.

	25th March, 2022	Rollout of First Hold Rewards – Netflix, Spotify and CrunchyRoll.
	April 2nd, 2022	Development of SQUIDswap begins
	May 1st, 2022	*Launch on MATIC Network *Community Vote required.
	May 15th, 2022	Listing on CoinMarketCap
Research and Development phase	May 29th, 2022	SQUID Wallet Development – awarding of contract for development of physical squid wallets.
	July 20th, 2022	Launching SQUID Swap – Full featured exchange defi exchange on BSC, ETH, MATIC with NFT Swap and full integration of SQUIDverse.
	August 21st, 2022	Publication of PoC Research for pNFT Trading Model
	Sept 29th, 2022	Rollout of 1 st SQUID Hardware Wallets
	Nov 5th, 2022	SQUID PoW Blockchain development with auto-invest begins.
	December 15th, 2022	Squid Exchange Launch/ Partnership

Tokenomics 2.0

A major focus of many de-fi projects have been to create a static reward system combined with deflation. We're taking that one step further. Tokenomics 2.0 is a new way to incentivize holding while maximizing rewards.

The SQUID Token employs powerful tokenomics that are designed to create value for all vested partners and parties. SQUID Token has a low transaction fee structure of 6% that is designed to optimize early adoption with long-term capital preservation by holding incentivization and negative selling pressure.

Fixed Token Supply	5,000,000,000 (5 Bn) SQUID Tokens.	100%
Circulating Supply	3,000,000,000 (3 Bn) Tokens.	60%
Comet Fund Reserve	500,000,000 (500 Mn) Tokens.	10%
LP Acq Locks	500,000,000 (500 Mn) Tokens.	10%
*Exchange & Chain Token Locks	1,000,000,000 (1 Bn) Tokens.	20%

*We will have a community vote on which exchanges we will approach and when we should do so. The team has identified the following exchanges to be in our strategic interest:

Binance
Bybit
BitMart

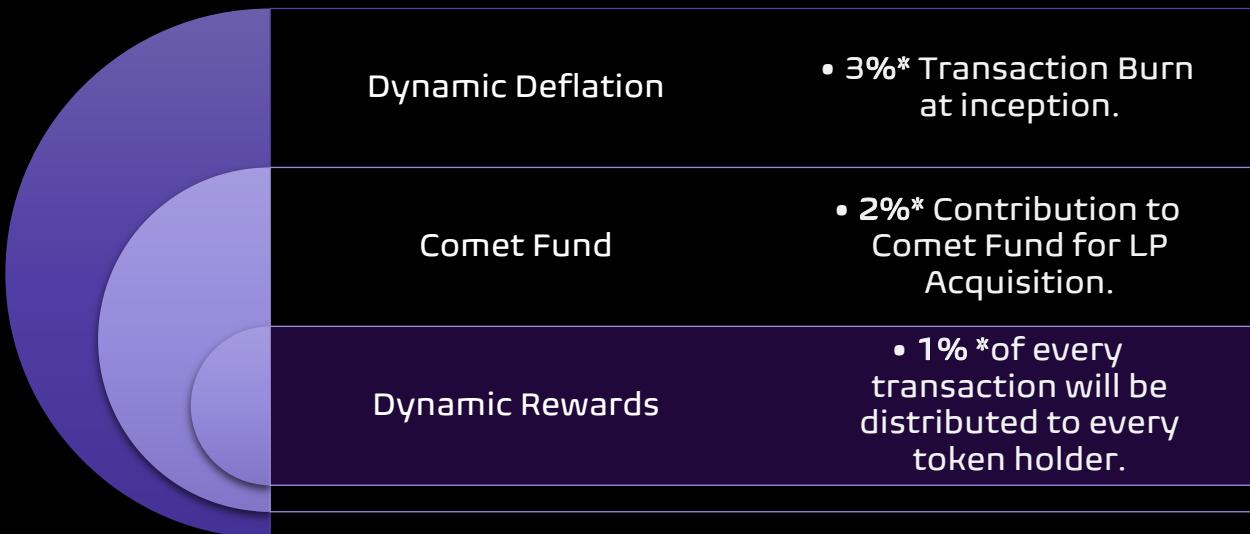

Diagram 3: Launch Rate Fee Structure * Percentage % Fee Structure varies according to deflationary/rewards function.

Volumetric Transaction Burning

SQUID Token is deflationary and has a fixed supply. Every interaction with the smartcontract will burn tokens. This drives scarcity while token accumulation and distribution occur. Over time, the entire liquidity pool will be controlled by the community.

Deflation is a powerful tool to offer increased value through manipulation of supply-demand economics. Deflation at the beginning of projects has a larger impact on the price action.

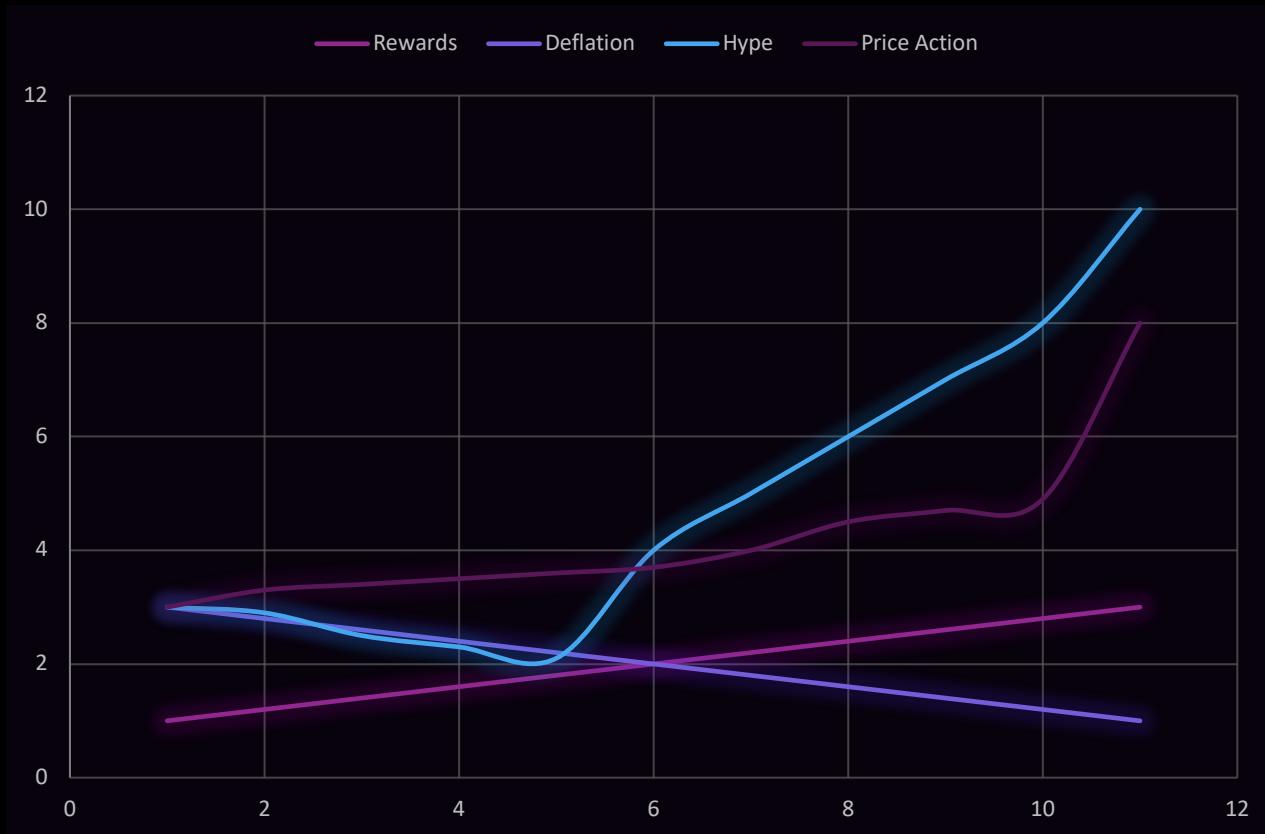

Deflationary pressure serves a couple purposes:

- This will bolster the price of SQUID Token and ensure that its value appreciates over time bringing value to Investors and incentivizes long-term holding.
- Anti-Inflation: No new tokens can be minted preventing the possibility of diluting the market cap and dumping.

The goal of SQUID Token is to become a repo of wealth worthy of the cosmos. Our token's value is also bonded to tangible pieces (pNFTs). This makes the SQUID Token a store of tangible and intangible wealth (qNFTs). This ensures that over time both our pNFTs and qNFTs increase in value over time.

Deflationary Function

As a project matures, returns will decrease since new holders are psychologically less inclined to buy scarcer tokens at a higher price. To combat this, we've created a decreasing deflationary function that is inversely correlated to the token reward system.

Rewards Function

Our transaction fee structure is volume dependent and therefore attracting new adopters after launch and into the next year will be key. As deflation slows down, dynamic rewards will increase in the exact proportion that deflation has decreased. This will form a local golden cross where older holders who have benefitted from increased price action will now benefit from the same increase in token rewards while new adopters can benefit from future deflation and larger rewards.

SQUID-LP Tokenomics

A fundamental principle of investing in SQUID will involve creating token lockers for adding liquidity pairs to increase holdings of the Comet Fund. The foundation of SQUID Token's value is the SQUID-LPs possessed by the Comet Fund. Encouraging LP-Pair growth is important to increase TVL for the launch of SQUID Swap and the SQUID Exchange Partnership.

Protecting against Impermanent Loss and Arbitrage

Investments into the Comet Fund are dynamically managed and shuffled adding and removing token constituents during times of volatility will balance liquidity and ensure that the fund grows at a rate that supports token value growth and vice versa. The capacity to do this will come from our own Tentacle FIAT Onramp which will provide liquidity for token buy-backs.

All future projects will be funded directly by transaction fees generated and revenues from our NFT+ Marketplace. Investors will be rewarded through consistent token value appreciation due to our investment protocols, models, and fee structure while our NFTs will be protected by consistent capital appreciation through an ever-increasing store of cryptocurrency assets including Bitcoin, Ethereum, BNB and accumulation of physical NFT works.

SQUID SWAP

Coming in Q1, 2022

The eventuality of SQUID token will obviously prompt the development of a full featured defi-exchange that is directly integrated with our pNFT protocol, the Tentacle FIAT Protocol along with our SQUIDverse NFT marketplaces.

Mothership: SAFU Managed Smart Pools

Smart Pooling is an innovative approach to simplifying the process of DeFi field farming. SQUID Finance will automatically analyze trend data from multiple purpose-built indicators and automatically stake SQUID Tokens in the most profitable liquidity pairs. This is an extrapolation of the Comet Fund which will drastically reduce the amount of manual work on the part of the investor while mitigating the risk with investing high-volatility assets/pools.

Asteroid Staking:

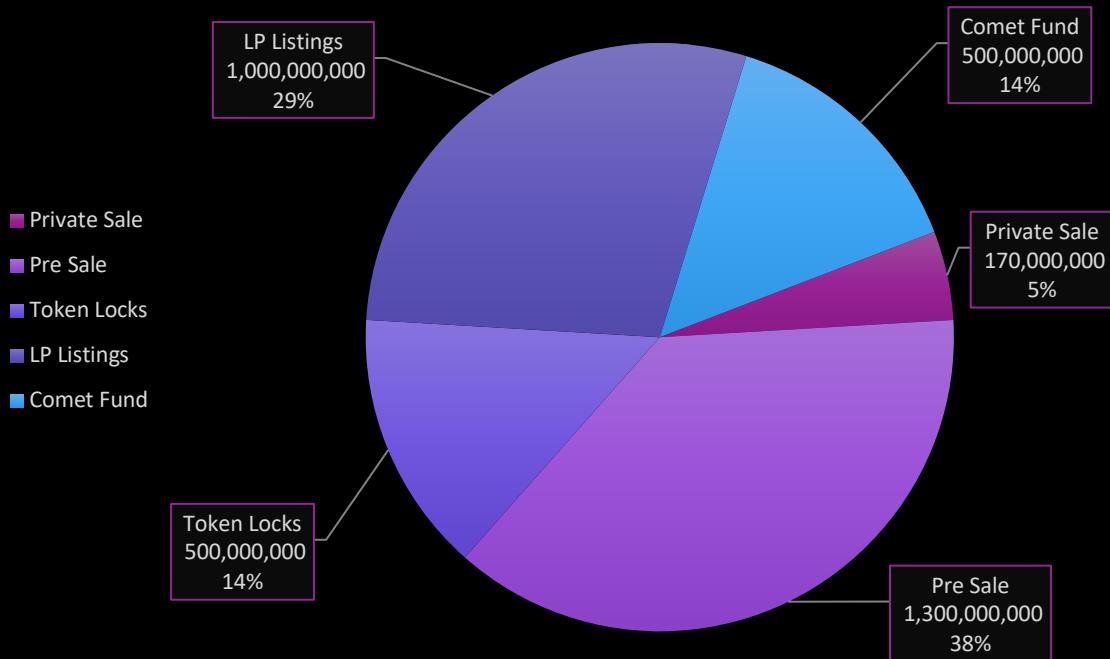

Asteroid staking is a form of yield farming protocol. You'll be able to stake your SQUID tokens in a peer-to-peer fashion which allows for greater returns in higher risk pools. A user can create their own pool and choose their desired LPs by staking their own tokens and allowing users to invest in their shared stake.

NFT Staking: Stake your SQUID pNFTs in the SQUIDverse Vault and earn royalties on trading volume.

The SQUID Team recognizes that for widespread adoption of SQUID Token we will require a targeted marketing strategy that will reach a large cross-section of people.

Allocations

5 Billion Total Supply

Presale Allocations:

Max Number of Tokens: for Launch IDO: **3,470,000,000 \$SQUID Tokens**

Max Number of tokens for Public Presale: **2,047,140,000 \$SQUID Tokens**

PancakeSwap Liquidity: 60%

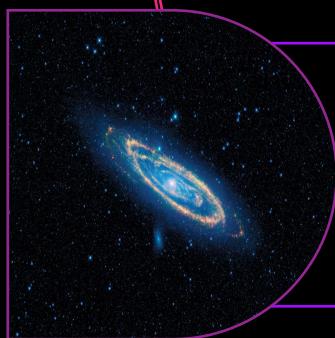

Presale BONUS: 10% more tokens.

3 YEAR TRAGECTORY

Milky Way Phase (Year 1)

- Establish SQUID Token on multiple chains.
- Establish Rewards System.
- Launch NFT+ Marketplace
- Publish findings on PoW for pNFTs.
- Acquire LP.
- Launch SQUID Swap.

Andromeda Phase (Year 2)

- Exchange Partnerships.
- Initiate SQUID Coin Blockchain Development.
- Expand the pNFT Model.
- Investments into SpaceX, Virgin Galactic and other disruptive space technologies.

Pinwheel Phase (Year 3)

- Launch of SQUID Coin Blockchain.
- Establish the Space Commerce Investment Fund.
- Establish the framework for Space Ticketing via Cryptocurrency - Space Miles.
